

IN THE SPECIFICATION

Page 8, rewrite the section of the specification that begins on line 7 as follows:

[[--]]A non-limiting example of the unit formulation for the formation of the nucleus is:

granulate (from above)	68mg
hydroxypropylmethylcellulose	31mg
lactose	75mg
aerosil 200	0.35mg
Mg stearate	1.65mg[[--]]

5) Formation of delayed release nucleus: controlled pressure compression in a tablet press to obtain nucleus hardness equal to 7-8kN.

6) Preparation of the melatonin solution for the "cortex" of the tablets, containing the following excipients:
hydroxypropylmethylcellulose, lactose, ethyl alcohol, purified water.

A nonrestrictive example of the formulation in solution for the "cortex" is:

melatonin	2.7%
hydroxypropylmethylcellulose	8.8%
lactose	6.4%
titanium dioxide	0.8%
ethyl alcohol	17.3%
purified water	64%[[--]]
